SAMPLE DOCUMENT

Demonstration of features

Tim Considine

2022-01-29

CONTEXT

This is just a sample document to test the Cloudron Pandon PDF Builder.

It is just a markdown document. Upload it ot the app with any images and cover background.

This is an example of using awesomebx.sty to add styling to content.
Have a look at some other features.

Make sure you understand and tweak the preamble which is at the beginning of the document.

Preamble

This has core information to setup the document for building a PDF.

FEATURES

You can include images and other features in the body of the document.

They should be in the same directory as the document.

Cover logo

One logo you may want to use is on the cover page.

It can be references in the preamble.

Cover Background

Also in the preamble, you can specify a cover.

This is just a PDF with any graphics you want to show on the cover page.

The document title and other document data will be over-printed ont this background.

This is another styling feature to draw attention to content.
You can add multiple lines.

The styling features you can use are :

```
1  noteblock: [note]
2  tipblock: [tip]
3  warningblock: [warning]
4  cautionblock: [caution]
5  importantblock: [important]
6  tcolorbox: [box]
7  info-box: [info]
8  warning-box: [warning]
9  error-box: [error]
```

Subheadings

This is a 3rd level subheading. You can use standard markdwon for this, e.g. ###.

You can also add a blockquote for certain content

Other standard markdown can be used.

- bullets
 - sub-bullets

- bullets

Check guides on the internet for writing Markdown.

Images

An image is included in the body of the document using standard Markdown.

```
1 ```![Sample Image](sample-logo.png)```
```

Figure 1: Sample Image

Highlight text

You can highlight text using a **back-tick** character at start and end of text.

NB: this is not the same as a single quote.

[LOGO]

SAMPLE TEXT

sample text

Occasionally you may need to include some **latex** instructions to control document layout and appearance. EG: `\vskip 0.3em`

Awesome Boxes

Étienne Deparis

2019-07-27 v0.6

1 Introduction

Awesome Boxes is all about drawing admonition blocks around text to inform or alert your readers about something particular. The specific aim of this package is to use [FontAwesome 5](#) icons to ease the illustration of these boxes.

The idea of admonition blocks comes from the ones you can easily do with [AsciiDoc](#).

2 How to use it?

Just download this package and call it at the beginning of your document:

```
\usepackage{awesomebox}
```

3 Provided boxes

3.1 Inline boxes

The provided boxes follow the name convention of the [admonition blocks](#) from [AsciiDoc](#).

```
\notebox{Lorem ipsum...}
```

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nam aliquet libero quis lectus elementum fermentum.

Fusce aliquet augue sapien, non efficitur mi ornare sed. Morbi at dictum felis. Pellentesque tortor lacus, semper et neque vitae, egestas commodo nisl.
